Biol. 30:883-897 (1996).
-!- CATALYTIC ACTIVITY: ATP + L-aspartate + L-glutamine = AMP + diphosphate + L-asparagine + L-glutamate.
-!- PATHWAY: Asparagine biosynthesis.
-!- SIMILARITY: Contains 1 asparagine synthetase domain.
-!- SIMILARITY: Contains 1 type-2 glutamine amidotransferase domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

WS-09-479-614-29

Sequence 29, Application US/09479614

Patent No. 6573373

GENERAL INFORMATION:

APPLICANT: Weber, Eric

TITLE OF INVENTION: Feline Immunoglobulin E Molecules and Related Methods

FILE REFERENCE: P-1047

CURRENT APPLICATION NUMBER: US/09/479,614

CURRENT PILING DATE: 2000-01-07

EARLIER APLICATION NUMBER: 05/015,033

EARLIER FILING DATE: 1999-01-07

WUMBER: OF SEQ ID NOS: 34

SOFTWARE: PatentIn Ver. 2.0

SEQ ID NO 29

LENGTH: 496

TYPE: PRT

CORANISM: Felis catus

US-09-401-636-9
Sequence 9, Application US/09401636
Patent No. 6913749
GENERAL INFORMATION:
APPLICANT: Hellman, Lars T.
TITLE OF INVENTION: ENHANCED VACCINES
FILLE REFERENCE: 10223/006001
CURRENT APPLICATION NUMBER: US/09/401,636
CURRENT FILING DATE: 1999-09-22
PRIOR FILING DATE: 1998-11-02
NUMBER OF SEQ ID NOS: 11
SOFTWARE: FESTEREQ for Windows Version 4.0
SEQ ID NO 9
LENGTH: 341
CURRENT APPLICATION WUMBER: US/09/401,636
CURRENT FILING DATE: 1999-09-22
PRIOR APPLICATION NUMBER: US 60/106,652
PRIOR FILING DATE: 1998-11-02
PRIOR FILING DATE: 1998-11-02
SPINMER OF SEQ ID NOS: 11
SOFTWARE: FRRESEQ for Windows Version 4.0
SEQ ID NO 6

Sequence 11, Application US/09401636

Patent No. 6913749

GENERAL INFORMATION:

TITLE OF INVENTION:

TITLE OF INVENTION:

FILE REPERENCE: 10223/006001

CURRENT FILING DATE: 1999-09-22

PRIOR APPLICATION NUMBER: US 60/106,652

PRIOR APPLICATION NUMBER: US 60/106,652

PRIOR APPLICATION NUMBER: US 60/106,652

PRIOR PILING DATE: 1999-11-02

NUMBER OF SEQ ID NOS: 11

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 11

RESULT 1 ADR10610

Novel antibody that specifically binds to mammalian IgE epitope, useful for testing an allergen reactivity of IgE sample, detecting mammalian IgE or treating asthma or anaphylactic shock. Antiasthmatic; Antiallergic; Immunosuppressive; IgE; dog; asthma; anaphylactic shock; 5.91 monoclonal antibody; 3.76 monoclonal antibody; Cat IgE epitope recognised by monoclonal antibody 3.76, SEQ ID 10. ADR10610 standard; peptide; 18 AA. (UYNC-) UNIV NORTH CAROLINA STATE. 15-JAN-2004; 2004WO-US003566. 16-JAN-2003; 2003US-0440472P. 21-OCT-2004 (first entry) WPI; 2004-593545/57. WO2004065936-A2. Hammerberg B; Felis catus. 05-AUG-2004. ADR10610;

Example 6; Page 9; 14pp; English.

specifically binds to a mammalian IgE epitope, where the epitope is between amino acids 145-166 or 356-374 of mammalian IgE, e.g. dog IgE. (I) is useful for testing an allergen reactivity of an IgE sample. The allergen is chosen from mold, pollen, dust mite, milk, egg, soy, peanut and corn allergens. The sample is a biological sample collected from a dog, cat or horse. (I) is also useful for detecting mammalian IgE and for treating asthma or anaphylactic shock. The 5.91 and 3.76 monoclonal antibodies recognise epitopes on canine IgE corresponding to amino acid residues 357-371 (ADR10601) and 146-162 (ADR10609) respectively of the present invention relates to a novel monoclonal antibody (I) that The

The methods and compositions of the present invention are useful for eliciting feline immune responses for and/or treating IGE-mediated responses, such as allergies. This is the amino acid sequence of a cat immunoglobulin E (IgE) constant region.
canine IgE epsilon-chain. Recognition of epsilon-chains from IgE from cat, horse, pig and human by 5.91 and 3.76 was examined. Both 5.91 and 3.76 were observed to have good cross-reactivity with the epsilon-chain of IgE from cat and horse, but did not exhibit cross-reactivity with either pig or human epsilon-chains of IgE. The present sequence is the cat IgE 3.76 recognition site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated nucleic acid molecule encoding a portion of a feline IgE heavy chain protein, useful for treating and/or eliciting feline immune responses for IGE-mediated responses, such as allergies.

emicr. 1. use use to the propose to naturally processed and presented 19E peptides. C1-3 have antiallergic, antiasthmatic, immunosuppressive, vasotropic, dermatological, antialfammatory and cytostatic activities, and can be used as inducers of a CTL response against 1gE, and in vaccines. C1-3 can be used for modulating an IgE-mediated condition in a mammal. C1-3 are useful for modulating an IgE-mediated condition such as IgE-mediated atopic hypersensitivity condition, IgE-mediated non-atopic hypersensitivity condition, IgE-mediated non-atopic hypersensitivity condition, igE myeloma in a mammal. Preferably, C1-3 are useful for treating atopic hypersensitivity conditions (such as allergic athinitis, allergic asthma, food allergies, or atopic dermatitis), non-atopic hypersensitivity conditions (such as anaphylaxis, and urticaria hives). The present sequence represents an IgE heavy chain amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes a method (M1) for identifying peptides that induce cytotoxic T-lymphocyte (CTL) response against immunoglobulin E (IgE), comprising providing a test peptide (T) suspected of being able to bind to major histocompatibility complex (MHC) class I molecule, and naturally processed and presented IgE peptides, where a peptide that induces such a response is identified. Also described are compositions: (C1) comprising at least one immunogenic peptide (I) identified by (M1); (C2) comprising at least one isolated polynucleotide encoding (I); and (I) and (C3) comprising antigen-presenting cells that recognise at least one where C13 are able to bind to at least one MMC class I molecule and to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Identifying peptides that induce cytotoxic T-lymphocyte, CTL response against IgE, by identifying peptide eliciting CTL response to IgE peptides naturally presented by major histocompatibility complex class I
                                                                                                                                                                              Immunoglobulin B; vaccine; IgE; cytotoxic T lymphocyte response; immune response; major histocompatibility complex; MHC; immunogenic; antiallergic; antiaethmatic; immunosuppressive; vasotropic; cytostatic; dermatoological; antiinflammatory; IgE-mediated condition; food allergy; atopic hypersensitivity condition; allergic rhintis; allergic asthma; atopic dermatitis; non-atopic hypersensitivity condition; allergic rhintis; allargic asthma; urticaria hives.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            hives). The present sequence represents an IGE heavy chain amino acid sequence, which is given in an example from the present invention
                                                                                                                                      Cat IgE heavy chain amino acid sequence SEQ ID NO:25.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                2

New nucleic acid molecule encoding feline immunoglobulin E (IgE) heavy or light chain protein, useful for treating feline IgE-mediated responses e.g. allergies, parasitic infections or neoplasia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to the isolation of feline immunoglobulin (IgB) kappa light chain and IgE epsilon heavy chain proteins, and the polynucleotide sequences encoding them. The sequences of the invention are useful for treating feline IgB-mediated immune responses (e.g. allergies, parasitic infections or neoplasia), in vaccine technology, and lemunological techniques related to feline IgB and its functions or immunological techniques related to feline IgB and its functions. The present sequence represents feline IgE epsilon heavy chain #1
      IgE-mediated immune response; allergy; neoplasia; vaccine technology; antibody technology; antiallergic; antiparasitic; cytostatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New nucleic acid molecule encoding feline immunoglobulin B (IgB) heavy or light chain protein, useful for treating feline IgB-mediated responses e.g. allergies, parasitic infections or neoplasia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to the isolation of feline immunoglobulin E (IgB) kappa light chain and IgE epsilon heavy chain proteins, and the polynucleotide sequences encoding them. The sequences of the invention are useful for treating feline IgB-mediated immune responses (e.g. allergies, parasitic infections or neoplasia), in vaccine technology, sallergical techniques related to feline IgB and its functions the immunological techniques related to feline IgB and its functions. The present sequence represents feline IgB epsilon heavy chain #2

                                                                                                                                                                                                                                                                                    The invention describes an isolated nucleic acid molecule (I) encoding a portion of a feline IgE heavy chain protein. The methods and compositions of the present invention are useful for eliciting feline immune responses for and/or treating IGE-mediated responses, such as allergies. This is the amino acid sequence of a partial cat immunoglobulin E (IgE) heavy
                                                                                                                                                                                                                     New isolated nucleic acid molecule encoding a portion of a feline IgE heavy chain protein, useful for treating and/or eliciting feline immune responses for IGE-mediated responses, such as allergies.

It is useful for testing an allergen reactivity of an igE sample. The allergen is chosen from mold, pollen, dust mite, milk, egg, soy, peanut and corn allergens. The sample is a biological sample collected from a dog, cat or horse. (I) is also useful for detecting mammalian IgE and for treating asthma or anaphylactic shock. The 5.91 and 3.76 monoclonal antibodies recognise epitopes on canine IgE corresponding to amino acid residues 357-371 (ADRIGOL) and 146-162 (ADRIGOGO) respectively of the canine IgE epsilon-chain. Recognition of epsilon-chains from IgE from
                                                                                                                                                                          The invention describes an isolated nucleic acid molecule (I) encoding a portion of a feline IgE heavy chain protein. The methods and compositions of the present invention are useful for eliciting feline immune responses for and/or treating IGE-mediated responses, such as allergies. This is the amino acid sequence of a partial cat immunoglobulin E (IgE) heavy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel antibody that specifically binds to mammalian IgE epitope, useful for testing an allergen reactivity of IgE sample, detecting mammalian IgE or treating asthma or anaphylactic shock.
                                        New isolated nucleic acid molecule encoding a portion of a feline IgE heavy chain protein, useful for treating and/or eliciting feline immune responses for IGE-mediated responses, such as allergies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Antiasthmatic; Antiallergic; Immunosuppressive; IgE; dog; asthma; anaphylactic shock; 5.91 monoclonal antibody; 3.76 monoclonal antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a novel monoclonal antibody (I) that

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes immunoglobulin E (IGE)-CH3 domain anti-apprides (I). (I) have anti-allergic, anti-anaphylactic and anti-asthmatic properties. (I) induces polyclonal antibodies specific for a target effector site on the epsilon-heavy chain of IGE, and so preventing triggering and activation of mast cells and basophils and downregulation of IGE synthesis. Conjugates, or fusion peptides, containing (I) are used for active immunisation against IgE-mediated allergy dermatitis. Nucleic acids that encode these compounds are useful for recombinant production of corresponding peptides or in DNA vaccines. Conjugates of (I) that include a promiscuous T helper cell epitope. (functional in genetically diverse subjects), in addition to a B cell target epitope, have increased immunogenicity and may include cyclic constraints (disulfied bridge) to stabilise conformational features and may include cyclic constraints.
                                                                                                                                                                  ö
cat, horse, pig and human by 5.91 and 3.76 was examined. Both 5.91 and 3.76 were observed to have good cross-reactivity with the epsilon-chain of IgE from cat and horse, but did not exhibit cross-reactivity with either pig or human epsilon-chains of IgE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      maximize cross-reactivity to the natural target. They induce safe (non-anaphylactogenic) antibodies. AAY79994 to AAY80084 represent amino acid sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Immunoglobulin E; IgE; epsilon heavy chain; antigenic; antigen; immunoglopatic; immunoglimulatory; carrier protein; helper T cell epitope; antibody; allergy; allergic disease; immunisation; anti-allergic; anti-asthmatic; asthma; anaphylaxis; dermatitis.

This polypeptide is encoded by exons 1-4 (see AAT79278) of canine IgE heavy chain constant region (epsilon) genomic DNA. Another polypeptide, comprising the exon 5 and 6 product, is given in AAW33068. Recombinant peptides encoded by exons 1-6 can be produced in eukaryotic or prokaryotic cells. Such peptides, and antibodies raised against them, are used in methods to treat the manifestation of allergy in dogs, e.g. to treat Type I immediate hypersensitivity, and for immunomodulation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Isolated canine IgE heavy chain constant region DNA - useful to develop products for treatment of canine allergies and for immunomodulation in

The cloning of the IgE gene allows produ. of large quantities of recombinant IgE using bacterial, yeast, mammalian, insect or vixal systems. The IgE can be used in drug development (e.g. small molecule screening, assay development and anti-IgE antibody generation). Fragments of IgE can be used in vaccines or to prevent IgE-mediated hypersensitivity. The new sequence information permits targeted modulation of IgE-mediated immune
                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DNA encoding canine IgE and IgA - useful in vaccines, anti-sense rapy, assays, drug screening, etc.

The present invention describes a method (M1) for identifying peptides that induce cytotoxic T-lymphocyte (CTL) response against immunoglobulin to Igas, comprising providing a test peptide (T) suspected of being able to bind to major histocompatibility complex (MHC) class I molecule, and naturally processed and presented IgB peptides, where a peptide that induces such a response is identified. Also described are compositions: (C1) comprising at least one immunogenic peptide (I) identified by (M1); (C2) comprising at least one isolated polymuleotide encoding (I); and (C3) comprising antigen-presenting cells that recognise at least one (M) where C1-3 are able to bind to at least one MHC class I molecule and to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ;

the present interaction describes a mercial transportation of the present information describes a mercial transportation of the present information of the providing a test peptide (T) suspected of being able to bind to major histocompatibility complex (MrC) class I molecule, and evaluating (T) for ability to elicit in a mammal a CTL response to naturally processed and presented IgB peptides, where a peptide that induces such a response is identified. Also described are compositions: (C) comprising at least one immunogenic peptide (I) identified by (MI); (C2) comprising at least one isolated polynucleotide encoding (I); and (C) comprising at least one isolated polynucleotide encoding (I); and (C) comprising at least one isolated polynucleotide encoding (I); and (C) are able to bind to at least one MHC class I molecule and to elicit in a mammal a CTL response to naturally processed and presented IS where C1-3 are babe to bind to a natiatilary and cytostatic activities, and can be used as inducers of a CTL response against IgE, and in conformation and can be used as inducers of a CTL response against IgE, and in conformation by a conficient of modulating an IgE-mediated condition in a conformative condition, IgE-mediated condition as the conformation and presential for treating atopic hypersensitivity conditions (such as allergic rhinitis, allergic asthma, food allergies, or atopic dermatitis), non-thine the conformation and the present and the presential and the present and the presential and the presential and the presential and the presential and the presential and the presential and the presential and the presential and the presential and the presential and the presential and the presential and the presential and the presential and the presential and the presential and the presential and the presential and the presential and the presential and the presential and the presential and the presential and the presential and the presential and the presential and the presential and the presential and the presential an
                                                                                                                                                                                                                                                                                                      antiallergic; antiasthmatic; immunosuppressive; vasotropic; cycostatic; dermatological; antiinflammatory; IgB-mediated condition; food allergy; atopic hypersensitivity condition; allergic rhinitis; allergic asthma; atopic dermatitis; non-atopic hypersensitivity condition; anaphylaxis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Identifying peptides that induce cytotoxic T-lymphocyte, CTL response against IgE, by identifying peptide eliciting CTL response to IgE peptides naturally presented by major histocompatibility complex class
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes a method (M1) for identifying peptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                hives). The present sequence represents an IgE heavy chain amino acid sequence, which is given in an example from the present invention
                                                                                                                                                                                            Duckbilled platypus IgE heavy chain amino acid sequence SEQ ID NO:29.
                                                                                                                                                                                                                                                    Immunoglobulin B; vaccine; IgE; cytotoxic T lymphocyte response;
immune response; major histocompatibility complex; MHC; immunogenic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Chen Z;

Platypus; immunoglobulin E; IgE; vaccination; infection; allergy; asthma; eczema; immunogenic peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            chain constant regions 2, 3 and 4 of the platypus IgE. It was used to construct a number of immunogenic peptides which consisted of regions of IgE from different mammals, which appear to cause a stronger polyclonal anti-self IgE response than peptides consisting of the same regions from one mammal. Immunogenic peptides, particularly those consisting of humans, against bacterial and viral infections and allergies, such as asthma, fur, pollen and food allergies and eczema

The present sequence is the protein sequence of an opossum CH2-rat CH3-opossum CH4 (ORO) chimeric IgE polypeptide. A vector comprising a nucleic acid encoding ORO can be used for recombinant production of this chimeric IgE in host, e.g. CHO, cells. The invention provides methods and materials related to expressing chimeric IgE proteins. Nucleic acid vectors, host cells, and methods for producing chimeric IgE polypeptides are provided. When administered to a mammal, the chimeric polypeptides can reduce the IgE antibody effects of IgE-related diseases such as asthma, allergies and eczema.
                                                                                                                                                                                                                                                                                                                                                                                                                             New host cell comprising a nucleic acid vector comprising a cytomegalovirus promoter, an Ig leader sequence, an insert sequence or SV40 late polyadenylation sequence, useful in producing a chimeric IgE polypeptide.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Cyspecies X72025 [imported] - Xylella fastidiosa (strain 9550)
Cyspecies: Xylella fastidiosa
Cyspecies: Xylella fastidiosa
Cypate: 18-Aug-2000
#sequence _revision 20-Aug-2000 #text_change 09-Jul-2004
Cypate: 18-Aug-2000
#sequence of the plant pathogen Xylella fastidiosa.
Ryanonymous, The Xylella fastidiosa Consortium of the Organization for Nucleotide Sequence of the plant pathogen Xylella fastidiosa.
Ayritte: The genome sequence of the plant pathogen Xylella fastidiosa.
Ayreference number: A02515; MUID:20365717; PMID:10910347

    -!- COFACTOR: Zinc (By similarity).
    -!- PATHWAY: Degradation of allantoin (purine catabolism); first step.
    -!- SIMILARITY: Belongs to the DHOase family.

                                                                                                                                                                                                         MEDLINE=21996410; PubMed=12000953; DOI=10.1038/417141a; Bentley S.D., Chater K.F., Cerdeno-Tarraga A.-M., Challis G.L., Thomson N.R., James K.D., Harris D.E., Quail M.A., Kieser H., Harper D., Bateman A., Brown S., Chandra G., Chen C.W., Collins M., Cronin A., Fraser A., Goble A., Hidalgo J., Hornsby T., Howarth S., Huang C.-H., Kieser T., Larke L., Murphy L.D., Oliver K., O'Neil S., Rabbinowitsch E., Rajandream M.A., Rutherford K.M., Rutter S., Seeger K., Saunders D., Sharp S., Squares S., Taylor K., Warren T., Wietzorrek A., Woodward J.R., Barrell B.G., Parkhill J.,

```

TISSUE SPECIFICITY: Preferentially expressed in normal male and female reproductive tissues, prostate, testis, fallopian tube, uterus, and placenta, as well as in prostate cancer, testicular cancer, and uterine cancer.

SIMILARITY: Belongs to the GAGE family

Patent No. 6811782

GENERAL INFORMATION:

APPLICATION:

TITLE OF INVENTION: PEPTIDE COMPOSITION AS IMMUNOGEN FOR THE TREATMENT OF

TITLE OF INVENTION: ALLERGY

TITLE OF INVENTION: ALLERGY

TITLE OF INVENTION: ALLERGY

TITLE OF INVENTION: ALLERGY

TITLE OF INVENTION: ALLERGY

CURRENT APPLICATION NUMBER: US/09/701,623C

CURRENT FILING DATE: 2000-12-01

PRIOR FILING DATE: 1999-06-21

PRIOR PILING DATE: 1999-06-21

PRIOR FILING DATE: 1999-06-20

NUMBER OF SEQ ID NOS: 91

SCOFTWARE: Patentin Ver. 2.1

SEQ ID NO 2

TYPE: PRI

TYPE: PRI
